DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/17/2009 has been entered.

Allowable Subject Matter

Claims 1-4 and 19-24 are allowed.

The following is an examiner's statement of reasons for allowance:

Re claims 1-4, 19, 21 and 23-24, the prior art fails to teach or suggest, "A solid-state image pickup device comprising: a substrate with a light incident side and a non-light incident side facing away from said light incident side; and a photosensor section provided in said substrate, said photosensor section including a first photosensor particularly sensitive to light of a first wavelength and a second

photosensor particularly sensitive to light of a second wavelength which is shorter than the first wavelength, wherein, **said first photosensor extends toward said non-light incident side in a depth direction to an extent greater than does said second photosensor, and said first photosensor and said second photosensor do not overlap in the depth direction".**

Re claim 20, the prior art fails to teach or suggest, "A solid-state image pickup device comprising: a substrate with a light incident side and a non-light incident side facing away from said light incident side; a photosensor section provided in said substrate, said photosensor section including a first photosensor particularly sensitive to light of a first wavelength and a second photosensor particularly sensitive to light of a second wavelength which is shorter than the first wavelength, **a channel section in said substrate at a location beneath said second photosensor relative to said light incident surface; and a gate for transporting electric charge obtained as a result of a photoelectric conversion process carried out by said first photosensor to said channel section, wherein, said first photosensor extends toward said non-light incident side to an extent greater than does said second photosensor, and said first photosensor is particularly sensitive to a light beam of the red or green color and said second photosensor is particularly sensitive to a light beam of the blue color".**

Re claim 22, the prior art fails to teach or suggest, "A solid-state image pickup device comprising: a substrate with a light incident side and a non-light incident side facing away from said light incident side; a photosensor section provided in said substrate, said photosensor section including a first photosensor particularly sensitive to light of a first wavelength and a second photosensor particularly sensitive to light of a second wavelength which is shorter than the first wavelength, a read gate provided in said substrate and adjacent said second photosensor relative to said light incident surface; **and a channel section in said substrate and beneath said second photosensor relative to said light incident surface, wherein, said first photosensor extends toward said non-light incident side to an extent greater than does said second photosensor, and said read gate is effective to transport electric charge from said second photosensor to said channel section**".

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
